The Easy4u portal – a new way for students to access the high-quality technology they need

Class Technology Solutions (CTS) is a leading education ICT solutions provider that provides consultancy, infrastructure services, network development and upgrades, and managed support services to educational establishments throughout the UK.

CTS have developed and brought to market innovative solutions and introduced to the UK the Easy4U subscription service.

CTS have teamed up with Dell, Microsoft and Lenovo to provide a revolutionary new way for students everywhere to access the high-quality technology they need, with a portal called Easy4u.

The FCA approved Easy4U subscription service assists schools/MATs, colleges/Universities by offering a personalised, full-service education laptop to their students, with a customised school-web shop, a self-service portal, and full-servicing and repair cover. The whole process is seamless, with parents requiring no credit-checks and the Easy4u school laptops are affordable and robust, selected specifically for the education sector.

What does the Easy4U subscription offer? The opportunity for a parent to purchase or rent (not leased) a device that has been selected specifically for education by the institution. Whatever option is chosen, the device is ordered through a customised portal, without any credit checks for the parent or guardian.

Once ordered the device is configured to meet the needs of the educational establishment at the UK Easy4U service centre. The devices are delivered on site and are distributed by Easy4U staff providing a unique personalised service to students. Easy4U staff are on hand to answer any questions or queries that students may have.

The subscription service includes a complete wrap around, all-in one service including, full warranty and service cover. The subscription service is underpinned by comprehensive support from the Easy4U service and customer support services teams via phone, email and chat. Replacement and loan devices are available where student devices are being repaired, or in the instance of damage and theft, meaning zero downtime for students in the classroom.

The Easy4U subscription service also includes a single point of contact for repairs,contract administration, invoicing, payment collection, insurance handing and debtor controls.

If you're looking for accessible & affordable digital education, then we make it Easy4U!

"I was genuinely pleased that managing such a large number of Surface devices had such a low impact on our support team and their workload," said Paul Martin, head of IT services at Christ's Hospital School. ∎
