

Testimonials

“Invaluable expertise and support”

“The recent successful conversion of much of our heating and hot water to a ground source heat pump system at St George’s College has been the most challenging project I’ve undertaken over the past 12 years. Why? Because so much of the project entailed work underground, which always incurs a degree of risk, no matter how careful the planning and preparation. I’m very grateful to ReEnergise: without their expertise and support this project would not have happened or been successful. I particularly valued their project management and engineering insights, and their communication of complex engineering and commercial issues in a straightforward and forthright manner.”

Greg Cole, Bursar, St George’s College, Weybridge

“Instilling confidence to make net-zero decisions”

“ReEnergise were carefully chosen to write our self-funded Estate Decarbonisation Plan with a view to the School making an application for a PSDS grant. The EDP process was managed efficiently from the initial phase of data gathering to production of the final report. The School was kept engaged in the process and from the presentation of options, we were able to confidently select our future low-carbon heating solution. ReEnergise supported us every step of the way with the PSDS application process right through to award of the grant. We are very excited to continue to work with ReEnergise to deliver our low-carbon solutions and to start our decarbonisation journey.”

Amanda Chapman-Richardson, School Business Manager at The Corsham School

“Deep level of understanding of the education sector”

“I have contacted several organisations for support with the net zero agenda, alongside ReEnergise. Whilst there are, of course, other people who have detailed technical knowledge and/or who have zero-carbon advisory experience across a range of sectors, I am yet to come across another organisation who understand so well how their work sits in the context of independent education. It saves so much time and money not having to get them up the curve on that.”

Sue Roxby, Business Director, Methodist Independent Schools Trust

“Thorough, clear, forthright advice”

“We selected ReEnergise to do some initial heat decarbonisation feasibility work for us, then follow-up with the preparation of PSDS grant applications. I would strongly recommend them to any school or college seeking to make progress with decarbonisation; or just wanting to find out where to start. They’re really thorough and give clear, forthright advice.”

Matt Horton, Head of Estates, Kingston Maurward College, Dorset

“You provided exactly what was promised”

“Thank you once again for your time and effort today. It was hugely appreciated. The presentation, Net-Zero Strategy, Estate Decarbonisation Plan and waste and water reports were very well received. There was universal acknowledgement of the effort you had put in, the quality of the final piece and the detail within it. It has given us exactly what we needed and wanted and we all felt that you provided exactly what was promised. Once again thank you to you and the whole team for an outstanding piece of work, which I am confident will help define the course of Haileybury in the next two decades and beyond.”

Simon Heard, Deputy Master, Haileybury

“Exceedingly knowledgeable and patient”

“Using the wealth of information you gave me, I was able to convince the developers to work a solution using a combination of air source heat pump: gas boiler (80:20). The result is a new gym building with an annual CO₂ footprint of 7 tonnes instead of 30 tonnes. None of this would have been possible without you. Thank you for your patience and time back in December. Your work has reached far, not only will the new school gym be more sustainable, but I believe we have educated local developers so they will present better options to their clients. In addition, we have a school management that is much more informed on sustainable heating.”
